

goIT Challenge

Encouraging high school students to learn about and apply technology to community challenges.

The shortage of students studying STEM is a national priority. As a global technology company it is our aim to use our core business to impact the STEM shortage in Australia.

We know students in year 8 form opinions about whether studying technology in future years is right for them.

The TCS GoIT Challenge aims to inspire students to think differently about technology. To learn technical aspects – but more importantly to apply technology to any educational discipline, to any industry or to any community problem.

Open to students in year 8

Register your team!
